We offer a complex scale of services as regards metal works:

» laser cutting of sheets and profiles  
» water jet cutting  
» shearing  
» CNC bending, bending of sheets, round, square and other profiles, rolling  
» Inserts /pem-helicoils/  
» sand blasting of stainless steel, aluminium and black steel  
» phosphating, acid pickling, electrochemical polishing of stainless steel  
» powder coating, wet coating  
» CNC milling and turning  
» robotic welding – welding with TIG, MIG and MAG  
» 3D measuring, 3D laser measurement, measuring the surface roughness  
» Wet Painting Process

FIBRA laser technology IPG - YLS 3000 with power 3000 W

CNC milling machine a lathe technology DOOSAN

Powder coating with all RAL chart colours and shades. We can apply also special finishes - matt, gloss, semi-gloss, textured, metallic, hammered - according to the client needs. Our company offers a curing oven of unique dimensions for coating parts of sizes up to: 550 cm x 110 cm x 170 cm and 640 cm x 190 cm x 295 cm.

Wet coating line including the dryer
This kind of coating perfectly adjusts to the powder coating lines of 7 m and 5.5 m we have.

Modular CNC laser Adige-SYS LS 5 Fibra with the possibility of extending it as a tube laser. A huge advantage of this technology is its automated system for cutting sheets as well as tubes and profiles. Further we have acquired CNC four cylinder rolling machine, which is currently the most precise, fastest and easiest to work with.

SAFAN press brake
We are able to meet the demanding requirements of our customers and bend metal sheets up to a maximum length of 4 m and a tonnage of 170 tonnes!

Electrochemical polishing.
This technology further extends the services we provide as part of our surface treatment division, i.e. sand blasting and acid pickling. The electropolishing process smooths and streamlines the microscopic surface of a metal object such as 304, 316, and the 400 series stainless steel. As a result, the surface of the metal is microscopically featureless, with not even the smallest speck of a torn surface remaining.

3D measuring tool FARO Arm Adge 9 with 7 axes and a scanner which allows to measure almost everything in space in real time. On the basis of the results we can issue measurement protocols. The all-new FARO Edge is the most advanced, state-of-the-art FaroArm ever produced.

FlexArc® ABB welding robot
FlexArc® is a new generation of standardized welding cells, which are designed to deliver cost-effective, state-of-the-art robotic welding operations.

Wet Painting Process
